About Pacific Pride's Door Products:

With more than 75 cumulative years of experience building, designing, and engineering wood doors, Pacific Pride Building Products knows wood doors! The insistence of exact tolerances, the moisture level of all wood components, and the hand selection of each piece of wood that go into our wood doors ensure the absolute best quality and outstanding value in the marketplace today.

We take great pride in providing our customers with the best designs at best possible value. All our doors are prefinished with a 9 step oil-based polyurethane process at the factory, allowing us to finish all edges of the panels before the assembly of the doors. This process is extremely important for the long life of the doors and minimizing any panel issues.

Your front door makes a statement. So it’s important to choose one that’s not only beautiful but reflects your style as well. Pacific Pride brings you the perfect balance of style, quality, and value with hardwood Premium, Builders, and Cottage series doors that both elevate and enhance any facade. Choose Pacific Pride for a smart investment that will fit your needs, your home, and your life.
**Unfinished Slabs**

Ensuring Quality Through Rigorous Testing

What Do Structural, or Design Pressure, Ratings Mean?

DP is a performance specification for how strong a door is, expressed in how many pounds per square foot (psf) of pressure it can withstand. This specification can fluctuate based on several factors, such as geographic location, the height of the building, the location of the door in relation to the building, etc. All of these factors are used to calculate what the Design Pressure (DP) is for a specific door.

During testing, a door is attached to a wooden frame and clamped to a specially designed wall. Air pressure is gradually reduced on the inside of the door, which increases the pressure on the outside until the window fails (breaks beyond repair). The test pressure must reach 1.5 times the design pressure for 10 seconds without the door suffering permanent damage. In other words, a door with a Class / DP of 30 would have to withstand 45 psf. The instant the door fails, the psf is recorded and is used for the calculation. Laboratories will then issue labels that indicate the DP for the door – labels used by the Window and Door Manufacturers Association (WDMA), the American Architectural Manufacturers Association (AAMA), and other organizations.

See your local county building planner to see what DP rating is best for your area. Pacific Pride will not provide regional information for DP ratings.
A Pacific Pride Builders Series Door Features:

- TDI Rated / DP 50
- These doors have been tested and approved to meet a Design Pressure (DP) rating of 50. In order to qualify for a DP 50 rating, the door or window is subjected to extreme testing conditions that simulate hurricane force winds up to 173 mph.
- Available in both 4-9/16” and 6-9/16” Jambs (2” Extension kit)
- Oil rubbed bronze ball bearing hinges provide years of easy swing
- Adjustable Composite Bronze Sill
- 2-3/8” backset
- Composite Jambs
- High-performance compression weather-stripping resists rot and corrosion while sealing out the weather elements
